### Standard Control Panel -EPmaster EPM6

Protection, distribution and automatic control panel, which starts the generator set when it detects a mains failure and stops it when the mains is restored with the control unit EPM6. It also starts and stops the group manually via a pushbutton or remote start-up by contact.

It has the following:

- ① Emergency stop push button
- ② Protections:
  - Circuit breaker (preheating resist.) 2P (16 A)
  - Protection fuses for control module
- ③ Voltage & speed trimmers
- ④ Battery charger
- ⑤ DC switch
- ⑥ Working Lamp switch
- ⑦ Distribution: Direct output of the circuit breaker
- ⑧ EPM6 & EPM6+ (cloud monitoring communication)
- ④G control and protection centre

## EPmaster EPM6

It has a digital LCD screen, which provides easy reading of the information regarding the Engine, Alternator, Mains and Charging. The controller meets all requirements for Auto Mains Failure (AMF) applications including remote communication and internet control, user configuration and complete genset monitoring and protection.

### • READINGS that can be made:

**Engine:** cooling temperature/oil pressure/revolution speed (rpm)/fuel level/battery voltage/battery alternator voltage/operating hours/number of start

**Alternator:** voltages between phases and between phases and neutral/frequency/phase sequence

**Mains:** frequency/voltages between phases and between phases and neutral (L1-N, L2-N, L3-N)/voltages between phases and (L1-L2, L2-L3, L1-L3)/phase sequence

### •Protection of the engine and alternator, with the ALARMS activated:

**Engine:** low oil pressure/high coolant temperature/low and high battery Voltage./failure of the alternator to charge batteries /Low fuel level.

**Alternator:** low and high voltage/low and high frequency/overload /short-circuit/

**Mains:** over and under voltage and loss of phase

### •Control of the set:

STARTS and STOPS the set AUTOMATICALLY when mains failure is detected and when it is restored, respectively. It can also operate MANUALLY and Auto Transfer Switch control

### •Other characteristics:

Event log, real-time clock, scheduled start & stop generator (can be set as start genset once a day/week/month whether with load or not). Maximum 99 event logs can be memorized.

With maintenance function. Types (date or running time) can be optional and actions (never, warning, or shutdown) can be set when maintenance time out.

Equipped with CANBUS port and can communicate with J1939 engine. Not only can monitor frequently-used data (such as water temperature, oil pressure, speed, fuel consumption and so on) of ECU machine, but also control starting up, shutdown, raising speed and speed droop via CANBUS port

RS485 communication interface enables "Three remote" functions (remote control, remote measuring and remote communication) according to MODBUS protocol.

Parameter setting: parameters can be modified and stored in internal FLASH memory and cannot be lost even in case of power outage; most of them can be adjusted using front panel of the controller and also can be modified using PC via USB or RS485 port.
